Acapella

Design Variations:

Three different Acapella models are available; each has its own distinct design and is available with or without arms.

Overview

Frame is constructed of kiln-dried maple hardwoods.

Joints are double doweled and securely glued to ensure maximum strength.

Corners are reinforced with wood corner blocks and lag bolts. Metal brackets are also used on armless models to provide additional support.

Back and seat are fully upholstered. Cushions are high resiliency, CFC-free polyurethane foam.

Nylon glides are 7/8" in diameter and dome shaped.

Features

Seat suspension on high back and mid-back models is constructed of 1/2" thick, 9-ply, molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges.

Seat suspension on wood top rail model is constructed of uni-directional webbing that is machine stretched across the open frame and stapled to the side rails.

Seat cushion, applied to the flexible webbing suspension, is 1 3/8" thick on high back models, 1 5/8" thick on mid-back models, and 1 1/2" thick on wood top rail models.

Seat upholstery on high back and mid-back models is wrapped over the seat cushion and secured to the seat suspension with upholstery staples. The entire seat assembly is fitted into the frame with wood screws inserted into the wood corner blocks.

Seat upholstery on wood top rail model is wrapped over the seat cushion and secured to the side, front, and back rails with upholstery staples.

Back on high back and mid-back models is constructed of heavy webbing secured to the frame with staples. 1" thick foam is applied to the webbing. Upholstery is wrapped over the foam and secured with upholstery staples.

Back on wood top rail model is constructed using 3/4" thick, 3-ply, contour molded plywood. Press fit fasteners attach the back to the frame. Upholstery is wrapped over 1" thick foam and secured with upholstery staples.
