Overview

Design Variations:

Horizontal Stitching Vertical Stitching Button Detailing

Three different upholstery details are available on both high back or mid-back models: vertical stitching, horizontal stitching, or button detailing.

Options:

Curved base caps (B31) with Antique English hooded-ball casters are available on desk chairs. Upcharge applies.

Outer back has 1/4" foam and is fully upholstered.

5-prong base on desk chairs has a rigid, steel under-structure. Maple hardwood radius-end base caps (B75) with Antique English hooded-ball casters are standard.

Arms have rigid, molded-urethane inserts, wrapped with 1/2" thick foam (1" thick on arm tops), and secured to the seat and back with metal L-brackets, T-nuts, and machine screws.

Cushions are 2 1/4" thick, high resiliency, CFC-free polyurethane foam.

Waterfall front edge slopes forward to reduce pressure and increase circulation in the users legs.

Features

Shell on desk chair is a one-piece, 9-ply molded plywood panel.

Frame on side chairs is kiln-dried maple hardwoods. Joints on back legs are double doweled and glued. Front legs use mortise and tenon joinery. Wood corner blocks, screws, and tie screws reinforce frame corners.

Seat suspension on side chair is constructed of unidirectional webbing that is machine stretched across the frame and stapled to the side rails. Seat cushion is 3 1/2" thick.

Back suspension on side chair is constructed of vertical and horizontal webbing stapled to the back frame.

Upholstery is wrapped over cushions and secured with staples.

Nickel-plated glides on side chairs are 7/8" in diameter.

Adjustability Features

Knee tilt and upright back lock	•
Tilt tension	•
Swivel	•
Pneu. height	•

• = standard

Knee tilt control provides minimal rise of the front seat edge when reclining, allowing the user's feet to remain firmly on the floor. Back may be locked in a full upright position by pushing in pneumatic height adjustment lever. Recommended for users weighing 225 lbs. or less.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

Pneumatic height adjustment allows user to raise or lower the seat height with a control lever while seated.

Controls are attached to the frame with T-nuts and machine screws.
