

Drawer Slide Replacement for Radius Profile File/File Pedestals

Tools Required

- Phillips screwdriver
- Square
- Tape Measure

Description

These instructions provide the basic information replacing drawer slides on radius profile file/file pedestals.

Installation

1. Open drawer and depress latch on drawer slides to disconnect existing drawer and case members. Remove screws to detach slide components from drawer and cabinet.
2. Using new replacement slides, determine right hand from left hand case member by locating the stamped "L" or "R" on the slide. Place square on the front edge of cabinet and scribe a horizontal line on inside surface of each cabinet end panel in location shown in Figure A.
3. Position case member back from front edge of end panel as shown in Figure A and attach with $\frac{5}{8}$ " long screws (minimum of 4 per 14" or 20" slide, or 5 per 26" slide.)
4. Position drawer members (non-handed) against back side of drawer front and at locations shown in Figure B. Attach drawer members to drawer sides using $\frac{7}{16}$ " long screws (minimum of 6 per 14" or 20" slide, or 7 per 26" slide).
5. Pull case members all the way out. Insert drawer by fitting drawer members under the case member hooks and snapping down over the front lock.
6. Re-adjust drawer front if necessary by loosening the screws on the back side of the drawer front.
