**XSITE®**

**Now, your ideas need not be confined to the cube**

Xsite is a frame and tile system that lets you think beyond the usual vertical and horizontal constraints. Run walls around architectural elements. Design offices of almost any dimension. Make turns at 120 degrees. Place storage components where they're most useful. Go monolithic inside the office, and modernist on the other side. Whatever office you're dreaming of, Xsite can make it real.

**Sustainably focused**

Xsite demonstrates Kimball Office's commitment to the environment. It's certified as low-emitting furniture; fully Indoor Air Quality (IAQ) compliant.

**LEED-CI**

the BIFMA sustainability standard

tiles: wood: natural maple; glass tiles: platinum metallic; glass: Prism; slat and trim: platinum metallic; Footprint® components: worksurfaces: wood: natural maple, softened edge; seating: Delano,™ cachet mink, Pollack Regatta shoreline.

**XSITE®**

**Set your offices free**

With Xsite, complete off-modularity is built right in. The Traxx mounting system is integral to the frame, so you can place tiles, work tools, desks and storage anywhere you want. Xsite lets you make the most of your wall space and your floor space.

**Fit and finish at every corner**

With simple top cap and corner components, you'll have fewer pieces, which means fewer seams, better fit and less installation time.

**A clear statement**

Frameless glass screens, used with flat top caps, add design panache to open, collaborative areas.

**Storage cubbies**

Footprint flat profile cubby storage units let you keep hot projects close at hand.

● Traxx integration for off-module connection

**If these walls could talk**

Use low walls (30," 42") to keep communication moving between stations. 50" walls provide seated privacy, yet daylight streams in. Or build high (68") to ensure conversations stay inside the office. Xsite frames are available in five heights, with stackers that let you build up to increase privacy.

No matter how tall you go, tiles can always be placed independent of the frame, so there are no limits to your creativity. And, you can give staff just what they need to stay organized, on task and productive with Footprint® storage. Cabinet, drawer, file and shelving components are available in many shapes, sizes and heights, to give you plenty of options to customize office configurations.

tiles: terra plus meadow; trim and storage: platinum metallic; Footprint® worksurfaces and storage: natural maple; seating: Wish™ Pollack Skive lime.

**XSITE®**

**Be seen but not heard**

Glass tiles allow light to spread from windows to interior spaces, while maintaining the privacy and quiet required for confidential discussions or focused work. Because most tiles and top caps come up to eight feet long, your offices make a seamless, more professional presentation.

**Privacy on wheels**

Roll up a mobile screen anywhere you want to divide space—or need an oversized scratchpad. Available in marker board, translucent material or fabric, in two different sizes, mobile screens let you take space from public to private in moments.

**The circle is the  
new square**

Encourage creative thinking with a more creative office. Xsite's 120-degree connectors allow you to design offices that encourage collaboration. Let people work outside the box, and they might start thinking outside of it, too.

**Put every place  
to work**

Xsite Traxx® turns dead space into productive space. Put shelves and other work tools under the desk, and you can keep all the important projects off the worksurface, but still within reach.

Xsite tiles: Momentum Tracery Brindle; slat tile and trim: patina metallic; shown with Footprint® worksurfaces and storage; seating: Skye®, Perks® accessories.

**XSITE®**

**Consider all the angles**

From reception to touch-down, create more interesting offices by combining Xsite's 90-, 120- and 180-degree connectors. Open the angles, and minds will follow.

**Get into the groove**

With Xsite, you can hang work tools almost anywhere, and save the cost of slat tiles. Tools simply hang directly onto the Traxx® rail integrated to the frame.

tiles: inside: luster bistro, outside: wood: mocha cherry; paint: shadow; slat, trim and work tools: taupe metallic; Footprint® components: worksurfaces: wood: mocha cherry; softened edge storage: square profile: mocha cherry on taupe metallic metal pedestal; arc pull: satin nickel; seating: Skye® cachet gold leaf.

**XSITE®**

right: tiles: reflection quartz; slat tiles and trim: fog; Footprint® table: american walnut; seating: Beo®, Pollack Skive carrot.

**XSITE®**

**Design freely**

Xsite gives you more design options. Put different tiles on either side of the wall. Create space in more shapes. Customize storage systems. Place components wherever they're most useful. Distribute power and data easily, almost anywhere within the frame. Xsite eliminates limitations.

**Go with the grain**

You can extend the tradition and elegance of wood from tiles all the way to trim. At the reception station or in the executive suite, Xsite's wood details make a warm, welcoming statement.

tiles: reflection quartz; trim: inside: fog, outside: environmental grey; Footprint® worksurfaces and storage: american walnut; seating: Stature® outback sand and Beo® Pollack Skive carrot.

**XSITE®**

**Step inside** Work tools and Xsite performance tiles make use of slat tiles and space inside the frame to store, shelve, hang up or hang out all the things you need to have at hand. Files, CDs, binders and notebooks now have a home of their own.

**Tiles pop up and on, anywhere** Traxx® for Xsite and building walls work together to create a built-in feel without the cost of cabinetry. Start with wall Traxx and attach worksurfaces, storage, marker board, slats, fabric or other tiles directly to hard walls. Then, add an Xsite frame to build outward. Because tiles can be placed independent of the frame, you can continue the custom look with more freedom to create different looks inside and outside the office. Traxx and Xsite let you use your walls to express more about your office's culture, personality and brand.

**Three inches makes all kinds of things possible** Xsite frames can be extended in three-inch increments. So offices can be sized as needed. Architectural elements are no longer an obstruction. And reconfigurations, add-ons and changes can be made in inches, rather than by tearing apart the entire office.

left: tiles: luster bistro; trim: taupe metallic; Footprint® worksurfaces and storage: natural maple; seating: Wish,™ Pollack lvalo dandelion; middle and right: tiles: terra plus sand; trim: shadow; Footprint worksurfaces and storage: caramel maple; seating: Skye,® cachet gold leaf and Adagiato,® Pollack Relay shoreline.

**XSITE®**

**Make the most of it** Traxx® lets you do more with the space you have. Set desks at standing or sitting height. Use off-module connections to place offices of different shapes and sizes side-by-side. Put small spaces to work as a printer station or strategy area outfitted with Presentation Tools. Whatever application you choose, with Traxx, walls work harder.

### Let your imagination go off-module

Traxx,<sup>®</sup> Kimball Office's unique horizontal mounting system, is integral to Xsite, giving you complete off-module design and planning freedom. With Xsite Traxx, components from storage pieces to worksurfaces and tiles can be placed horizontally, almost anywhere on the frame. The implications are enormous:

- Create seamless or segmented looks anywhere you want; you're no longer restrained by the connection points of typical panel systems.
- One side of the panel can be completely different from the other, giving you more freedom to express any—or several—aesthetics throughout the office.
- Reconfiguration is literally a snap. Traxx attaches to the mid-frame supports, and then overheads, tiles, worksurfaces and tools attach to Traxx, making it easy to relocate any component without disturbing the frame or walls.
- Worksurfaces and storage components can be placed anywhere along Xsite Traxx, so it's no problem to customize workspaces for personal preference or functional requirements.

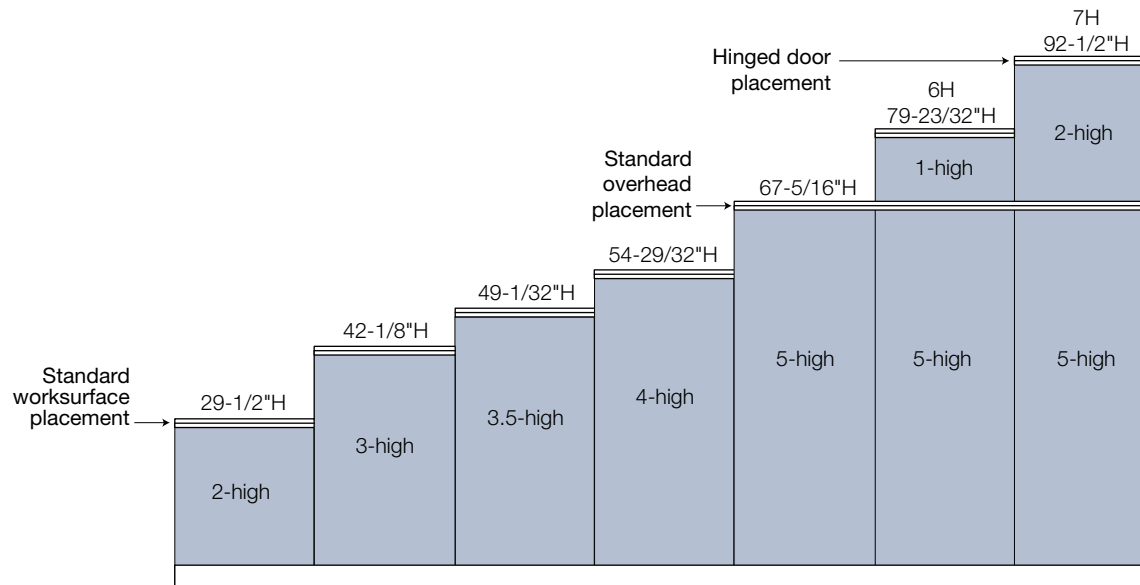

### Trim it in style

Xsite top caps and trim are available in two profiles, and a wide range of paints and wood finishes.

- 1 Frame: welded, fixed frames
- 2 Top-channel lay-in: routes data cables
- 3 Mid-frame support: spans frame and provides support
- 4 Mid-block jumper: connects power between mid-distribution blocks
- 5 Duplex receptacle
- 6 Data port
- 7 Base to power/data tile jumper: connects power from base wireway harness to mid-distribution block
- 8 Base wireway jumper: connects power between adjacent base wireway harnesses
- 9 Base wireway harness: distributes power through frame base
- 10 Glass tile with wood frame
- 11 3-way, 90-degree connector
- 12 Xsite Traxx®: supports tiles, worksurfaces and storage
- 13 Wood tile
- 14 Marker board tile
- 15 Storage tile with fold-down shelf
- 16 Power/data tile: provides power and data access
- 17 Off-module connection: add frames without adding dimension
- 18 Storage tile with web kit
- 19 Tackable acoustic tile
- 20 Storage tile with tip-out drawers
- 21 Slat tile
- 22 Panel-to-panel hi-lo trim: a clean finish where panels change height
- 23 End trim

Xsite frames are available in **five** different base heights and can be built up to 80" and 93" tall by adding one or two stackers. Dimensions are calculated to the top of the frame with glides fully recessed. Curved profile top caps add 1/2" to overall height; flat top caps add 1/4." Glides provide 2-1/2" adjustment.
